

Hybrid Digital Printing

HP Indigo 5000

At the heart of MLI's one-to-one strategy is variable hybrid printing powered by the HP Indigo 5000 6 color press, a complete printing solution combining the latest advances in conventional and digital printing technology. The Indigo utilizes true inks rather than toner, and can print true Pantone® colors along with full four-color process. Through hybrid digital printing, MLI offers the ability to affordably vary full color content specific to your customers' tastes.

Copies and Laser Printing

MLI offers color and black and white copies and digital prints, from your originals or your digital file. The prints can all be the same, or can include variable data merges.

Large Format Printing

What if you need a 40" poster, but you only need one copy? Or you need a 40 foot poster? MLI offers posters, banners and other large format pieces on materials from high gloss photo paper to heavy-duty vinyl. Our UV inks are designed for both indoor and outdoor use.

Giclée Prints

A Giclée (pronounced "zhee-clay") is a high-resolution, archival quality digital ink-jet print. Because no screens are used, the prints have a higher apparent resolution than lithographs. MLI's Giclée process provides superior color, and the ability to affordably reproduce fine art, one print at a time.

Complete In-House Bindery

Our complete in-house bindery includes everything from collating, stitching, folding and trimming, to foil stamping and die cutting. Our fulfillment department can package your printing into kits, combine it with specialty items or your provided products, and ship it in any configurations you can imagine, worldwide.
